A Tiny Flying Machine Meets a Giant Rocket

From: Space.com Mined: 2026-11-10 3 min read

A tiny flying machine **hovered** in the sky at NASA's Kennedy Space Center in Florida. Behind it stood a giant rocket. The photo was Space.com's space photo of the day for November 9.

In front is the Jetson ONE. It is a small **electric aircraft** made for just one person. It was built by Jetson, a company in the United States. Behind it stands the top part of Blue Origin's huge **New Glenn** rocket.

The photo was taken during an event called MAX POWER. The event brought together people with new ideas and new technology. The Jetson ONE was flying at the UP.**Summit**, part of the big event. People watched as the little aircraft moved through the air and stayed still in one place.

Jetson is making small **electric aircraft** for one person to travel short trips. **New Glenn** is built to carry things far beyond Earth. One machine is made for a **single rider**. The other is made to leave the planet. Together, they show that flight can mean very different things.

Word Treasure

hovered -- Stayed in the air in one place without moving forward.

electric aircraft -- A flying machine that runs on electricity instead of fuel.

Summit -- A big meeting where people come together to share new ideas.

single rider -- One person who rides in a machine.

New Glenn -- The name of Blue Origin's huge rocket.

Background you need

NASA's Kennedy Space Center in Florida is a place where rockets are launched into space.

A rocket is a powerful machine that can carry things far beyond Earth, into space.

The Jetson ONE is a small electric aircraft made for just one person to travel short trips.

Break it down

WHO: The Jetson ONE, a small electric aircraft, and Blue Origin's huge New Glenn rocket.
WHAT: The tiny Jetson ONE flew in the sky in front of the giant New Glenn rocket while people watched.
WHERE: At NASA's Kennedy Space Center in Florida, during an event called MAX POWER.
WHY: The event brought together people with new ideas and new technology to show what flight can mean.

Why it matters

It shows that flying machines can be small enough for one person, so one day you might travel in the sky in a whole new way.

Test what you remember

1. What is the Jetson ONE?

- (A) A small electric aircraft made for just one person
- (B) A type of car
- (C) A giant rocket
- (D) A kind of boat

2. What stood behind the Jetson ONE in the photo?

- (A) A big airplane
- (B) A space station
- (C) A tall building
- (D) The top part of Blue Origin's New Glenn rocket

3. Where was the photo taken?

- (A) On a beach in California
- (B) At an airport in Texas
- (C) At a school in New York
- (D) At NASA's Kennedy Space Center in Florida

4. What is the New Glenn rocket built to do?

- (A) Carry one person on short trips
- (B) Carry things far beyond Earth
- (C) Fly people across a city
- (D) Stay still in one place

5. What event was the photo taken during?

- (A) A school science fair
- (B) A birthday party
- (C) A rocket launch
- (D) An event called MAX POWER

6. What did people watch the Jetson ONE do?

- (A) Land on the rocket
- (B) Fly all the way to the Moon
- (C) Move through the air and stay still in one place
- (D) Race against the rocket

Answer key (try the quiz first!): 1: A 2: D 3: D 4: B 5: D 6: C

Questions to think about
